TO: Minerals File

FROM: Doug Jensen, Reclamation Engineer *D. Jensen*

RE: Site Inspection, Sunroc Corporation, East Veyo Cinders Knoll, S/053/067, Washington County, Utah

Date of Inspection: February 3, 2003
Time of Inspection: 5:15 p.m.
Conditions: Cloudy, Cool
Participants: Doug Jensen, DOGM

Purpose of Inspection:

To check effect of mining that had taken place at the site since my last visit on October 16, 2002.

Getting to the site:

The site is located 1 mile west of highway 18, ~2 miles north of Veyo, Utah.

Observations:

The total disturbed area of the site has not changed since my last visit. A pit has been started within the area that was stripped of topsoil, as noted in my last inspection. The annual reports for the site notes that 15,000 tons of materials were removed from the site during 2002. The pit area has been fenced with a barbed wire fence. This fence distinguishes this permit site from an adjacent BLM community pit.

Photos of the site were taken.

Conclusions and Recommendations:

The site is clean and care has been taken to place the growth medium in berms that surround the excavation. This will provide for easy application of this material at closure.

jb
